# Panic Button Alert

The Omnilert Panic Button Alert enables subscribers to contact 9-1-1, the emergency hotline, or initiate a silent alarm. In all situations, the safety team is notified of the action taken and provided with their name, contact information, and location to determine appropriate next steps.

With a single click, safety teams can respond via text, phone, email, or by initiating an automated pre-defined workflow. A shared activity view provides a real-time account of the unfolding situation, enabling safety teams to coordinate their actions. All activities are fully logged, and can be reviewed and exported for post-event forensics and analysis.

Key Benefits:
- Take a proactive approach to preventing dangerous incidents
- Provide subscribers with enhanced safety in circumstances where they may not be able to make a phone call
- Gather key data and rich telemetry to determine the most effective action
- Quickly respond via text, phone, email, or by initiating an automated pre-defined workflow
- View a real-time account of all activities in the unfolding situation
- Review and export the activity log for post-event forensics and analysis
